

# LIFE SCIENCES, THE NEW CHALLENGE OF AXIS PARC.

**On January 28th, about 50 of you attended our first life science workshop organized by Axis Parc Fund and B19.**

During this day, we presented very broadly our project of the new Life Science Hub to young entrepreneurs, business leaders and curious people. This initiative is supported by a number of leaders in this domain such as Robert Taub (chairman and founder - Nyxoah and Man & Science) and Peter Jens (CEO - And Biopharma). We want to thank them for their inspiring contribution!

Firstly, this workshop was an opportunity to inform those interested about our project, that we have been thinking about for several months. With the support of Tribeca Capital Partners, Axis Parc Fund has identified the need for a dedicated cluster on Life Science. Our future hub will be both accelerator and incubator.

Secondly, this workshop was also the opportunity to meet start-ups and scale-ups from all segments of the Life Science cluster and help them discover our unique support including: coaching, advantageous rental conditions and financial and tax advise at preferred agreed rates from KPMG.

Thirdly Axis Parc Fund exposed some advantages to life science start and scale-ups such as:

- Life science start and scale-ups can benefit from 1 year rentfree use of space at Axis Parc, provided that their project is accepted by Axis Parc Fund.
- Axis Parc Fund can further invest into the properties according to the specific needs of these life science companies, provided that their project has been accepted.
- Axis Parc Fund has an experienced team on site which has a solid expertise in installing clean rooms and different type of laboratories.

Our next aim is to create awareness amongst researchers, investors and key stakeholders that a dedicated life science hub will be established in Axis Parc.
